

RealityCharting® Software version 4 New Features

Page 1 of 3

For more information, please see www.world-interplay.com

Help Videos – Want to know how to use any feature in RealityCharting® - watch a video.

Real Time Rules Check – Instead of having to manually run the rules check for charting violations, version 4 checks your work in real time and displays the status of how well you are doing.

Team Members – The information window now includes a place to easily document the name and contact information for all team members. This affords the ability to easily assign action items and solutions through the use of a drop down menu and in future RealityCharting® updates to quickly email files to your teammates.

File Attachments – The dream is now a reality. From the very first version of RealityCharting, users have envisioned the ability to attach files such as reports, photos and videos to the evidence box.

Cause Attributes – When hovering over a cause, icons appear along the top and display the number of solutions, comments or rules violations associated with that cause. Selecting any of these icons opens the related interface window. You can add solutions or notes to a specific cause simply by selecting the appropriate icon.

Improved Functionality – Version 4 provides many smart features that allow access to the functions when and where you need them. For example, selecting the More Information Needed icon opens the Action Item Report. Selecting the Stop icon opens the reasons for stopping window. Selecting the R at the end of an evidence box opens a window that allows you to attach a file in the reference window. Double clicking a cause highlights it and the successive cause paths. Double click the Options node and a new cause box appears.

Track Changes – This powerful feature identifies changes to cause box text or structure of the Realitychart and then allows an editor to accept or reject these changes.

Preferences – Customizing your Realitychart has never been easier. Using the new Preferences functionality, the user can customize many different features, the Problem Definition fields, the color of conditional causes, action causes or root causes and the advanced evidence selections. You can also modify the new Solution Assessment Report.

Hide/Show Causes – Need to make your Realitychart smaller so you can present a summary for executive briefings? With this new feature it is as simple as two mouse clicks.

Spell Check – Fix those spelling mistakes before you finalize your chart and build up your own dictionary of commonly used terms.

Solution Assessment Report – This great new feature allows the user to perform a detailed business analysis of the proposed solutions using customized user-generated criteria.

Custom View – One of many new features to allow changing the chart size to fit on a particular paper size. In addition to allowing you to change the chart scale, this innovative new feature allows you to move causes anywhere you want separate from your finalized Realitychart. Create as many customized charts as you want.

Chart Zooming – With version 4 you can zoom in or out on the workspace and in the various page layout views.

Multiple Charts/Navigation – With this feature you can open two or more Realitycharts at the same time and drag causes from chart to chart.

Print to PDF – To eliminate printer driver problems, version 4 prints to PDF and opens the file in an Adobe® Acrobat® window that also provides access to many new sharing features on Adobe.com.

Dashboard – The dashboard provides metrics on your Realitychart such as the number of causes or team member breakdown.

Packaged Files – If your Realitychart has references you want to share with others, version 4 will package the Realitychart and associated Reference files into a single file that can be sent to others and opened for a complete review.

Copy and Paste Causes – Another feature added by popular demand. You can now select as many causes as you want, copy them and paste them in another spot or another chart.

File Encryption – Individual Realitycharts or packaged files can be encrypted so the only way someone can open it is with the assigned password.

Insert New Effect – Users asked for it, and now they have it. You can now insert a cause between the causes by using this new feature.

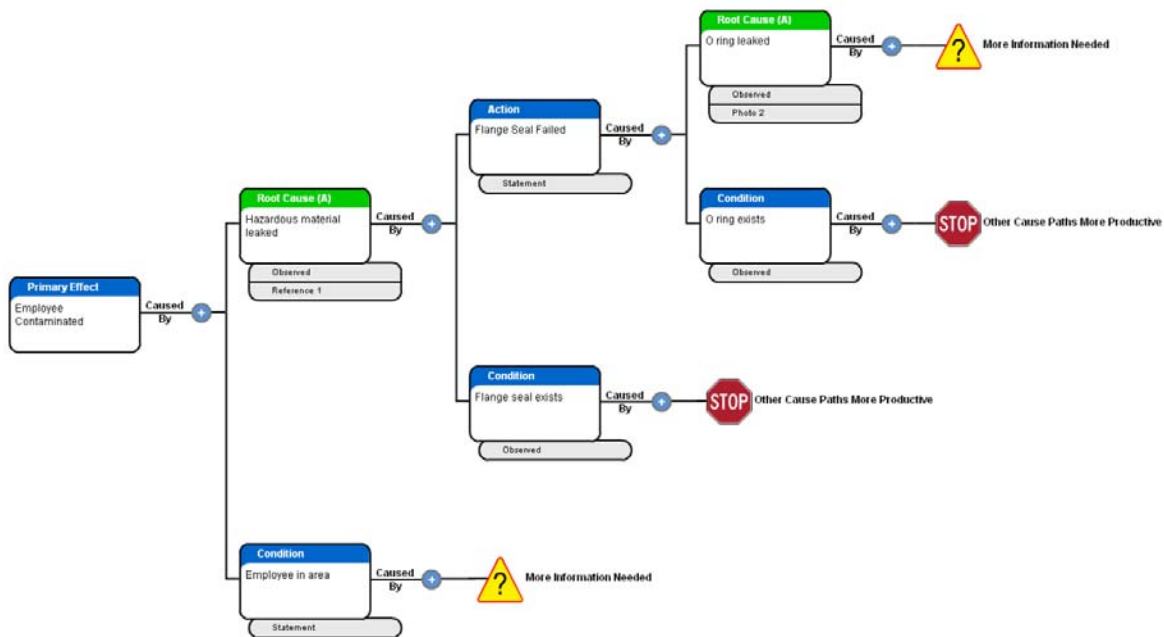

Color Individual Causes – Select one or more cause boxes and then using the new color tool in the menu bar, choose a color for the selected causes.

New Possible Solutions Report – The possible Solutions Report now has the ability to comment on each solution, assign an owner from a drop down list of team members and rank each solution.

New Graphic User Interface – Bold new colors and icons abound in this version.

Report Feedback – Most of the features you will find in version 4 came from you, the user and we want to continue to hear from you, so if you have difficulties or can't find the feature you want, give us some feedback by selecting the Report Feedback button in the top level menu bar.

Foreign Language Versions – For the many global companies that use RealityCharting® we now have the ability to easily convert it to a foreign language by use of a replaceable language table. Spanish and Portuguese will be coming soon with others to follow.
